

Isan Rodriguez Trimino

Senior/Staff AI Engineer (GenAI, RAG, LLMOps) | Client-Facing Tech Lead | Mentor

isanrtech@gmail.com | [Phone : +1 \(341\) 246-4084](tel:+13412464084) | Las Vegas, NV (Remote US) | <https://www.linkedin.com/in/isan-rodriguez/>

About Me

Senior/Staff full-stack engineer and client-facing technical lead with 15+ years of cloud-native delivery experience, targeting **Senior/Staff AI Engineer (GenAI/RAG)** and **Client-Facing AI Engineer / AI Solutions Architect** roles. I build **GenAI prototypes/internal tools** using **Retrieval-Augmented Generation (RAG)** patterns, **prompt engineering**, and an evaluation-driven mindset.

I treat AI systems like production software: **LLM evaluation** (golden sets/regression), guardrails (PII awareness/prompt-injection awareness), **monitoring/observability**, and cost/latency controls. I use **AI agents** (Copilot Chat, ChatGPT, and automation scripts) to accelerate delivery with **human-in-the-loop quality gates** (design/code review, tests, CI checks) and I'm comfortable leading client-facing discovery, requirements clarification, tradeoff communication, and mentoring teams.

Career Highlights

- Served as a client-facing technical lead, translating business needs into scoped technical plans and delivery milestones.
- Built **GenAI prototypes/internal tools** (RAG-style knowledge assistants and workflow automation) to speed up information retrieval and reduce manual work.
- Implemented an **AI-agent assisted SDLC** with **human-in-the-loop quality gates**: reviews, automated tests, CI checks, and clear acceptance criteria.
- Led cross-functional delivery across backend, frontend, and cloud; owned architecture decisions, operational readiness, and stakeholder communication.
- Mentored engineers and reinforced clean architecture, SOLID principles, and responsible AI practices (evaluation mindset and guardrails).

Professional Experience (Only the last 4)

Note: Many projects I worked on are proprietary to former employers; I avoid sharing details that could compromise confidentiality.

Tech Lead at SunAlgo

(March 2025 - Present Day) | Remote (US) | Full-time

- Served as the primary liaison between clients and internal teams, gathering requirements, aligning expectations, and leading delivery from design through deployment.
- Increased release cadence from 2–3 features/month to 4–5 features/week by tightening delivery execution and quality gates.
- Built **GenAI prototypes/internal tools** to accelerate knowledge retrieval and operational workflows (RAG-style patterns), while keeping data access and security constraints in mind.

- Introduced an **AI-agent assisted SDLC** (scaffolding, refactors, test generation, documentation automation) with **mandatory human-in-the-loop review**, CI quality gates, and team enablement.
- Mentored developers through design/architecture reviews and delivery execution; reinforced engineering standards (clean code and operational readiness).

Tech Lead at Lucid Motors

(February 2023 - March 2025) | Remote (US) | Full-time

- Drove architecture and delivery for a business-critical financial platform processing high-value workflows at scale.
- Improved the loan/lease approval workflow, reducing turnaround time from days to seconds for 10k daily active users; supported revenue-generating flows (thousands of dollars).
- Led and mentored 6+ developers and coordinated work across frontend, backend, and DevOps teams, aligning execution with quarterly OKRs.
- Owned system design and delivery using ReactJS, NestJS, MongoDB, and AWS; emphasized reliability, security, and release discipline.
- Partnered with Finance and Product as a technical bridge, translating business needs into technical requirements, delivery plans, and sprint goals; mitigated delivery risks.

Senior Software Engineer at Wizeline

(October 2021 - February 2023) | Remote (US) | Full-time

- Worked as a full-stack engineer on client projects, clarifying requirements with stakeholders and balancing delivery with maintainability and quality.
- Improved team delivery throughput by ~25% by strengthening execution hygiene (planning, code review standards, and reducing rework).
- Mentored junior developers; supported onboarding and ran workshops on clean code and scalable architectures.
- Contributed to authentication/login flows and backend APIs, prioritizing correctness and security fundamentals.

Enterprise Architect at Rooftop Ventures

(December 2020 - October 2021) | Mexico | Full-time

- Led architecture decisions and delivery across multiple web-based projects, owning code quality, PR reviews, and infrastructure direction.
- Scaled the product portfolio from 3 to 11 active products by standardizing architecture patterns and delivery practices.
- Improved production stability from weekly interruptions to rare occurrences (about 1 every 3 months or less) by introducing quality methods and release discipline.
- Increased developer leverage from ~1 developer per product to 3–4 products per developer through shared components, reusable patterns, and better workflows.
- Delivered containerized deployments via Jenkins pipelines and NGINX-based hosting infrastructure.
- Implemented real-time features via WebSocket and ensured PWA capabilities for cross-device UX.
- Improved knowledge sharing across the team to reduce single points of failure.

Tech Stack

- **GenAI / LLMOps (Prototypes/Internal Tools):** LangChain, Retrieval-Augmented Generation (RAG) patterns, embeddings + vector retrieval concepts, prompt engineering, LLM evaluation mindset (golden sets/regression), prompt/versioning hygiene, guardrails (PII awareness, prompt-injection awareness), monitoring/observability.
 - **Backend:** Python (FastAPI) | JavaScript/TypeScript (Node.js, ExpressJS, NestJS).
 - **Data:** MongoDB, PostgreSQL, MySQL, Redis.
 - **Cloud/Infra:** AWS, Docker, Linux, NGINX, Jenkins.
 - **Frontend:** ReactJS, Vue.js, HTML/CSS, JavaScript/TypeScript.
 - **Engineering Practices:** CI/CD, clean architecture, SOLID Principles, Design Patterns, Domain-Driven Design, Code review culture.
-

Languages

Spanish (Native) | English (B2) | French (A1)

Education

- Bachelor of Education in Computer Science
